## Palm Springs Schools Deploy DragonWave's Radios

12/15/2004

The **Palm Springs Unified School District** in Southern California has selected broadband wireless systems from **DragonWave Inc.** in a million dollar deal.

**Airlinks Networking**, an Indiana-based value-added reseller, began deploying DragonWave's AirPair wireless Ethernet products for the school district in August. The installations will continue throughout this year.

More than 25 links are planned for the network to provide backhaul support for the school district. Each AirPair link supports 200 Mbps throughput.

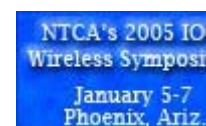

The school district, consisting of 26 locations in six cities, had considered using wireline infrastructure, but selected DragonWave's system as the most cost-effective, scalable solution.

"The Airlinks/DragonWave solution promises the quickest return on investment (ROI) and simplest, most cost-effective migration path," stated Rick Corl, technical director with the Palm Springs Unified School District.

DragonWave provides AirPair broadband wireless systems for operation in both the licensed and unlicensed bands (18 GHz to 26 GHz).
